The **java.util.Calendar.setFirstDayOfWeek***int* method sets the first day of the week.

Declaration

Following is the declaration for **java.util.Calendar.setFirstDayOfWeek** method

```
public void setFirstDayOfWeek(int value)
```

Parameters

- **value** -- The given first day of the week.

Return Value

This method does not return a value.

Exception

- NA

Example

The following example shows the usage of java.util.calendar.setFirstDayOfWeek method.

```
package com.tutorialspoint;

import java.util.*;

public class CalendarDemo {

    public static void main(String[] args) {

        // create a calendar
        Calendar cal = Calendar.getInstance();

        // print current first day of the week
        int day = cal.getFirstDayOfWeek();
        System.out.println("Current first day of the week:" + day);

        // set first day of the week as something else
        cal.setFirstDayOfWeek(Calendar.WEDNESDAY);

        // print altered first day of the week
        day = cal.getFirstDayOfWeek();
        System.out.println("Altered first day of the week:" + day);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Current first day of the week:2
Altered first day of the week:4
```
