Example

The following example shows the usage of java.util.Date.after method.

```
package com.tutorialspoint;

import java.util.*;

public class DateDemo {

    public static void main(String[] args) {

        // create 2 dates
        Date date = new Date(2011, 5, 21);
        Date date2 = new Date(2015, 1, 21);

        // tests if date 2 is after date and print
        boolean after = date2.after(date);
        System.out.println("Date 2 is after date: " + after);

        // tests if date is after date 2 and print
        after = date.after(date2);
        System.out.println("Date is after date 2: " + after);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Date 2 is after date: true
Date is after date 2: false
```
