

JAVA.UTIL.GREGORIANCALENDAR.GET ACTUALMINIMUM METHOD

http://www.tutorialspoint.com/java/util/gregorianCalendar_getactualminimum.htm

Copyright © tutorialspoint.com

Description

The **java.util.GregorianCalendar.getActualMinimum***intfield* method returns the minimum value that this calendar field could have, taking into consideration the given time value and the current values of the `getFirstDayOfWeek`, `getMinimalDaysInFirstWeek`, `getGregorianCalendarChange` and `getTimeZone` methods.

Declaration

Following is the declaration for **java.util.GregorianCalendar.getActualMinimum** method

```
public int getActualMinimum(int field)
```

Parameters

- **field** -- the calendar field

Return Value

This method returns the minimum of the given field for the time value of this `GregorianCalendar`

Exception

- **NA**

Example

The following example shows the usage of `java.util.GregorianCalendar.getActualMinimum` method.

```
package com.tutorialspoint;

import java.util.*;

public class GregorianCalendarDemo {

    public static void main(String[] args) {

        // create a new calendar
        GregorianCalendar cal =
            (GregorianCalendar) GregorianCalendar.getInstance();

        // print the current date and time
        System.out.println(" " + cal.getTime());

        // get actual minimum for day_of_month
        int min = cal.getActualMinimum(GregorianCalendar.DAY_OF_MONTH);
        System.out.println("Actual Minimum:" + min);

        // get actual minimum for YEAR
        min = cal.getActualMinimum(GregorianCalendar.YEAR);
        System.out.println("Actual Minimum:" + min);

    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Fri May 18 02:49:02 EEST 2012
Actual Minimum:1
```

Actual Minimum:1
