

JAVA.UTIL.LINKEDHASHMAP.CONTAINSVOLUME METHOD

http://www.tutorialspoint.com/java/util/linkedhashmap_containsvalue.htm

Copyright © tutorialspoint.com

Description

The **java.util.LinkedHashMap.containsKeyObjectvalue** method returns true if this map maps one or more keys to the specified value.

Declaration

Following is the declaration for **java.util.LinkedHashMap.containsKeyValue** method

```
public boolean containsValue(Object value)
```

Parameters

- **value** -- value whose presence in this map is to be tested

Return Value

This method returns true if this map maps one or more keys to the specified value

Exception

- NA

Example

The following example shows the usage of java.util.LinkedHashMap.containsKeyValue method.

```
package com.tutorialspoint;

import java.util.*;

public class BitSetDemo {

    public static void main(String[] args) {

        // create a new linked hash map
        LinkedHashMap map = new LinkedHashMap(5);

        // add some values in the map
        map.put("One", 1);
        map.put("Two", 2);
        map.put("Three", 3);

        // print the map
        System.out.println("Map:" + map);

        // check if map contains 3
        System.out.println(" " + map.containsKey(3));

        // check if map contains 5
        System.out.println(" " + map.containsKey(5));
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Map:{One=1, Two=2, Three=3}
true
false
```
