Copyright © tutorialspoint.com

Description

The **java.util.LinkedList.pop** method pops an element from the stack represented by this list. Popping means remove and return the first element of this list.

Declaration

Following is the declaration for **java.util.LinkedList.pop** method

```
public E pop()
```

Parameters

- NA

Return Value

This method returns the element at the front of this list

Exception

- **NoSuchElementException** -- if this list is empty

Example

The following example shows the usage of java.util.LinkedList.pop method.

```
package com.tutorialspoint;

import java.util.*;

public class LinkedListDemo {

    public static void main(String[] args) {

        // create a LinkedList
        LinkedList list = new LinkedList();

        // add some elements
        list.add("Hello");
        list.add(2);
        list.add("Chocolate");
        list.add("10");

        // print the list
        System.out.println("LinkedList:" + list);

        // pop the list
        System.out.println("Pop element in the list:" + list.pop());

        // print the list
        System.out.println("LinkedList:" + list);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
LinkedList:[Hello, 2, Chocolate, 10]
Pop element of the list:Hello
LinkedList:[2, Chocolate, 10]
```
