

JAVA.UTIL.LOCALE.GETISO3COUNTRY METHOD

http://www.tutorialspoint.com/java/util/locale_getiso3country.htm

Copyright © tutorialspoint.com

Description

The **java.util.Locale.getISO3Country** method returns a three-letter abbreviation for this locale's country. If the locale doesn't specify a country, this will be the empty string. Otherwise, this will be an uppercase ISO 3166 3-letter country code.

Declaration

Following is the declaration for **java.util.Locale.getISO3Country** method

```
public String getISO3Country()
```

Parameters

- NA

Return Value

This method does not return a value.

Exception

- **MissingResourceException** -- Throws MissingResourceException if the three-letter country abbreviation is not available for this locale.

Example

The following example shows the usage of java.util.Locale.getISO3Country method.

```
package com.tutorialspoint;

import java.util.*;

public class LocaleDemo {

    public static void main(String[] args) {

        // create a new locale
        Locale locale = new Locale("ENGLISH", "US", "WIN");

        // print locale
        System.out.println("Locale:" + locale);

        // print ISO3 country name for locale
        System.out.println("Name:" + locale.getISO3Country());

    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Locale:english_US_WIN
```

```
Name:USA
```
