

JAVA.UTIL.SIMPLETIMEZONE.EQUALS METHOD

http://www.tutorialspoint.com/java/util/simpletimezone_equals.htm

Copyright © tutorialspoint.com

Description

The **equals** *Object obj* method is used to compare the equality of two SimpleTimeZone objects.

Declaration

Following is the declaration for **java.util.SimpleTimeZone.equals** method.

```
public boolean equals(Object obj)
```

Parameters

- **obj** -- This is the SimpleTimeZone object to be compared with.

Return Value

The method call returns true if the given obj is the same as this SimpleTimeZone object; false otherwise.

Exception

- NA

Example

The following example shows the usage of java.util.SimpleTimeZone.equals

```
package com.tutorialspoint;

import java.util.*;

public class SimpleTimeZoneDemo {
    public static void main( String args[] ){
        // create two simple time zone objects
        SimpleTimeZone stobj1 = new SimpleTimeZone(720,"India");
        SimpleTimeZone stobj2 = new SimpleTimeZone(720,"India");

        // compare two objects
        System.out.println("Comparison result: " + stobj1.equals(stobj2));
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Comparison result: true
```
