

JAVA.UTIL.STRINGTOKENIZER.NEXTTOKEN METHOD

http://www.tutorialspoint.com/java/util/stringtokenizer_nexttoken.htm

Copyright © tutorialspoint.com

Description

The **nextToken** method is used to return the next token from this string tokenizer.

Declaration

Following is the declaration for **java.util.StringTokenizer.nextToken** method.

```
public String nextToken()
```

Parameters

- NA

Return Value

The method call returns the next token from this string tokenizer.

Exception

- **NoSuchElementException** -- This is thrown if there are no more tokens in this tokenizer's string.

Example

The following example shows the usage of `java.util.StringTokenizer.nextToken`

```
package com.tutorialspoint;

import java.util.*;

public class StringTokenizerDemo {
    public static void main(String[] args) {
        // creating string tokenizer
        StringTokenizer st = new StringTokenizer("Come to learn");

        // checking next token
        System.out.println("Next token is : " + st.nextToken());
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Next token is : Come
```
