

JAVA.UTIL.TIMEZONE.CLONE METHOD

http://www.tutorialspoint.com/java/util/timezone_clone.htm

Copyright © tutorialspoint.com

Description

The **clone** method is used to create a copy of this TimeZone.

Declaration

Following is the declaration for **java.util.TimeZone.clone** method.

```
public Object clone()
```

Parameters

- NA

Return Value

The method call returns a clone of this TimeZone.

Exception

- NA

Example

The following example shows the usage of java.util.TimeZone.clone

```
package com.tutorialspoint;

import java.util.*;

public class TimeZoneDemo {
    public static void main( String args[] ){

        // create object of TimeZone class.
        TimeZone timezoneobj = TimeZone.getDefault();
        System.out.println("Original object: " + timezoneobj);

        // cloning time zone object
        Object objClone = timezoneobj.clone();
        System.out.println("Clone object: " + objClone);
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Original object:
sun.util.calendar.ZoneInfo[, offset=19800000,
dstSavings=0, useDaylight=false, transitions=6, lastRule=null]

Clone object:
sun.util.calendar.ZoneInfo[, offset=19800000,
dstSavings=0, useDaylight=false, transitions=6, lastRule=null]
