

JAVA.UTIL.TIMEZONE.GETDISPLAYNAME METHOD

http://www.tutorialspoint.com/java/util/timezone_getdisplayname.htm

Copyright © tutorialspoint.com

Description

The **getDisplayName** method is used to get a name of this time zone suitable for presentation to the user in the default locale.

Declaration

Following is the declaration for **java.util.TimeZone.getDisplayName** method.

```
public final String getDisplayName()
```

Parameters

- NA

Return Value

The method call returns the human-readable name of this time zone in the default locale.

Exception

- NA

Example

The following example shows the usage of `java.util.TimeZone.getDisplayName`

```
package com.tutorialspoint;

import java.util.*;

public class TimeZoneDemo {
    public static void main( String args[] ){

        // create default time zone object
        TimeZone timezonedefault = TimeZone.getDefault();

        // get display name
        String disname=timezonedefault.getDisplayName();

        // checking display name
        System.out.println("Display name is :"+ disname);
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Display name is :India Standard Time
```
