

JAVA.UTIL.TIMEZONE.GETRAWOFFSET METHOD

http://www.tutorialspoint.com/java/util/timezone_getrawoffset.htm

Copyright © tutorialspoint.com

Description

The **getRawOffset** method is used to get the amount of time in milliseconds to add to UTC to get standard time in this time zone.

Declaration

Following is the declaration for **java.util.TimeZone.getRawOffset** method.

```
public abstract int getRawOffset()
```

Parameters

- NA

Return Value

The method call returns the amount of raw offset time in milliseconds to add to UTC.

Exception

- NA

Example

The following example shows the usage of `java.util.TimeZone.getRawOffset`

```
package com.tutorialspoint;

import java.util.*;

public class TimeZoneDemo {
    public static void main( String args[] ){

        // create time zone object
        TimeZone timezone = TimeZone.getDefault();

        // checking raw offset value
        System.out.println("Raw Offset value:" + timezone.getRawOffset());
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Raw Offset value:19800000
```
