

JAVA.UTIL.TIMEZONE.SETID METHOD

http://www.tutorialspoint.com/java/util/timezone_setid.htm

Copyright © tutorialspoint.com

Description

The **setIDStringID** method is used to set the time zone ID. This does not change any other data in the time zone object.

Declaration

Following is the declaration for **java.util.TimeZone.setID** method.

```
public void setID(String ID)
```

Parameters

- **ID** -- This is the new time zone ID.

Return Value

- **NA**

Exception

- **NA**

Example

The following example shows the usage of `java.util.TimeZone.setID`

```
package com.tutorialspoint;

import java.util.*;

public class TimeZoneDemo {
    public static void main( String args[] ){

        // create time zone object
        TimeZone tzone = TimeZone.getDefault();

        // set time zone ID
        tzone.setID("GMT+08:00");

        // checking time zone ID
        System.out.println("Time zone ID:" +tzone.getID());
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Time zone ID:GMT+08:00
```
