

JAVA.UTIL.TREESET.LAST METHOD

http://www.tutorialspoint.com/java/util/treeset_last.htm

Copyright © tutorialspoint.com

Description

The **last** method is used to return the last *highest* element currently in this set.

Declaration

Following is the declaration for **java.util.TreeSet.last** method.

```
public E last()
```

Parameters

- NA

Return Value

The method call returns the last *highest* element currently in this set.

Exception

- **NoSuchElementException** -- This exception is thrown if this set is empty.

Example

The following example shows the usage of java.util.TreeSet.last method.

```
package com.tutorialspoint;

import java.util.TreeSet;

public class TreeSetDemo {
    public static void main(String[] args) {
        // creating a TreeSet
        TreeSet <Integer>treeadd = new TreeSet<Integer>();

        // adding in the tree set
        treeadd.add(1);
        treeadd.add(13);
        treeadd.add(17);
        treeadd.add(2);

        // displaying the last highest element
        System.out.println("Last highest element: "+treeadd.last());
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Last highest element: 17
```
