

JAVA.UTIL.VECTOR.SIZE METHOD

http://www.tutorialspoint.com/java/util/vector_size.htm

Copyright © tutorialspoint.com

Description

The **size** method is used to return the number of components in this vector.

Declaration

Following is the declaration for **java.util.Vector.size** method

```
public int size()
```

Parameters

- NA

Return Value

The method call returns the number of components in this vector.

Exception

- NA

Example

The following example shows the usage of java.util.Vector.size method.

```
package com.tutorialspoint;

import java.util.Vector;

public class VectorDemo {
    public static void main(String[] args) {
        // create an empty Vector vec with an initial capacity of 4
        Vector vec = new Vector(4);

        // use add() method to add elements in the vector
        vec.add(4);
        vec.add(3);
        vec.add(2);
        vec.add(1);

        // let us print the size of the vector
        System.out.println("Size of the vector: "+vec.size());
    }
}
```

Let us compile and run the above program, this will produce the following result.

```
Size of the vector: 4
```
