Problem Description:

How to goto a link using Applet?

Solution:

Following example demonstrates how to go to a particular webpage from an applet using showDocument method of AppletContext class.

```
import java.applet.*;
import java.awt.*;
import java.net.*;
import java.awt.event.*;

public class tesURL extends Applet implements ActionListener{
    public void init(){
        String link = "yahoo";
        Button b = new Button(link);
        b.addActionListener(this);
        add(b);
    }
    public void actionPerformed(ActionEvent ae){
        Button src = (Button)ae.getSource();
        String link = "http://www."+src.getLabel()+".com";
        try{
            AppletContext a = getAppletContext();
            URL u = new URL(link);
            a.showDocument(u, "_self");
        }
        catch (MalformedURLException e){
            System.out.println(e.getMessage());
        }
    }
}
```

Result:

The above code sample will produce the following result in a java enabled web browser.
