Problem Description:

How to remove an element of array?

Solution:

Following example shows how to remove an element from array.

```
import java.util.ArrayList;

public class Main {
    public static void main(String[] args) {
        ArrayList objArray = new ArrayList();
        objArray.clear();
        objArray.add(0, "0th element");
        objArray.add(1, "1st element");
        objArray.add(2, "2nd element");
        System.out.println("Array before removing an element"+objArray);
        objArray.remove(1);
        objArray.remove("0th element");
        System.out.println("Array after removing an element"+objArray);
    }
}
```

Result:

The above code sample will produce the following result.

```
Array before removing an element[0th element, 1st element, 2nd element]
Array after removing an element[2nd element]
```
