Problem Description:

How to determine the upper bound of a two dimensional array ?

Solution:

Following example helps to determine the upper bound of a two dimensional array with the use of `arrayname.length`.

```
public class Main {  
    public static void main(String args[]) {  
        String[][] data = new String[2][5];  
        System.out.println("Dimension 1: " + data.length);  
        System.out.println("Dimension 2: " + data[0].length);  
    }  
}
```

Result:

The above code sample will produce the following result.

```
Dimension 1: 2  
Dimension 2: 5
```
