Problem Description:

How to get size of a collection?

Solution:

Following example shows how to get the size of a collection by the use of collection.add to add new data and collection.size to get the size of the collection of Collections class.

```
import java.util.*;

public class CollectionTest {
    public static void main(String [] args) {
        System.out.println( "Collection Example!\n" );
        int size;
        HashSet collection = new HashSet ();
        String str1 = "Yellow", str2 = "White", str3 =
"Green", str4 = "Blue";
        Iterator iterator;
        collection.add(str1);
        collection.add(str2);
        collection.add(str3);
        collection.add(str4);
        System.out.print("Collection data: ");
        iterator = collection.iterator();
        while (iterator.hasNext()){
            System.out.print(iterator.next() + " ");
        }
        System.out.println();
        size = collection.size();
        if (collection.isEmpty()){
            System.out.println("Collection is empty");
        }
        else{
            System.out.println( "Collection size: " + size);
        }
        System.out.println();
    }
}
```

Result:

The above code sample will produce the following result.

```
Collection Example!
```

```
Collection data: Blue White Green Yellow
```

```
Collection size: 4
```
