Problem Description:

How to get the first and the last element of a linked list ?

Solution:

Following example shows how to get the first and last element of a linked list with the help of `linkedListname.getFirst` and `linkedListname.getLast` of `LinkedList` class.

```
import java.util.LinkedList;

public class Main {
    public static void main(String[] args) {
        LinkedList lList = new LinkedList();
        lList.add("100");
        lList.add("200");
        lList.add("300");
        lList.add("400");
        lList.add("500");
        System.out.println("First element of LinkedList is :
" + lList.getFirst());
        System.out.println("Last element of LinkedList is :
" + lList.getLast());
    }
}
```

Result:

The above code sample will produce the following result.

```
First element of LinkedList is :100
Last element of LinkedList is :500
```
