Problem Description:

How to format seconds?

Solution:

This example formats the second by using SimpleDateFormat's constructor and sdf.formatdate method of SimpleDateFormat class.

```
import java.text.SimpleDateFormat;
import java.util.Date;

public class Main{
    public static void main(String[] args){
        Date date = new Date();
        SimpleDateFormat sdf = new SimpleDateFormat("ss");
        System.out.println("seconds in ss format : "
            + sdf.format(date));
    }
}
```

Result:

The above code sample will produce the following result. The result will change depending upon the current system time.

```
seconds in ss format : 14
```
