Problem Description:

How to use break to jump out of a loop in a method?

Solution:

This example uses the 'break' to jump out of the loop.

```
public class Main {
    public static void main(String[] args) {
        int[] intary = { 99,12,22,34,45,67,5678,8990 };
        int no = 5678;
        int i = 0;
        boolean found = false;
        for ( ; i < intary.length; i++) {
            if (intary[i] == no) {
                found = true;
                break;
            }
        }
        if (found) {
            System.out.println("Found the no: " + no
                + " at index: " + i);
        }
        else {
            System.out.println(no + "not found in the array");
        }
    }
}
```

Result:

The above code sample will produce the following result.

```
Found the no: 5678 at index: 6
```
