Problem Description:

How to match regions in strings ?

Solution:

Following example determines region matches in two strings by using regionMatches method.

```
public class StringRegionMatch{
    public static void main(String[] args){
        String first_str = "Welcome to Microsoft";
        String second_str = "I work with Microsoft";
        boolean match = first_str.
            regionMatches(11, second_str, 12, 9);
        System.out.println("first_str[11 -19] == "
            + "second_str[12 - 21]:-"+ match);
    }
}
```

Result:

The above code sample will produce the following result.

```
first_str[11 -19] == second_str[12 - 21]:-true
