Problem Description:

How to search a word inside a string ?

Solution:

This example shows how we can search a word within a String object using indexOf method which returns a position index of a word within the string if found. Otherwise it returns -1.

```
public class SearchStringEmp{
    public static void main(String[] args) {
        String strOrig = "Hello readers";
        int intIndex = strOrig.indexOf("Hello");
        if(intIndex == - 1){
            System.out.println("Hello not found");
        }else{
            System.out.println("Found Hello at index "
                + intIndex);
        }
    }
}
```

Result:

The above code sample will produce the following result.

```
Found Hello at index 0
Loading [MathJax]/jax/output/HTML-CSS/jax.js
```
