Copyright © tutorialspoint.com

Description

Javascript array **unshift** method adds one or more elements to the beginning of an array and returns the new length of the array.

Syntax

Its syntax is as follows –

```
array.unshift( element1, ..., elementN );
```

Parameter Details

element1, ..., elementN – The elements to add to the front of the array.

Return Value

Returns the length of the new array. It returns **undefined** in IE browser.

Example

Try the following example.

```
<html>
  <head>
    <title>JavaScript Array unshift Method</title>
  </head>

  <body>

    <script type="text/javascript">
      var arr = new Array("orange", "mango", "banana", "sugar");

      var length = arr.unshift("water");
      document.write("Returned array is : " + arr );
      document.write("<br /> Length of the array is : " + length );
    </script>

  </body>
</html>
```

Output

```
Returned array is : water,orange,mango,banana,sugar
Length of the array is : 5
```
