Description

Javascript date **setUTCMilliseconds** method sets the milliseconds for a specified date according to universal time.

Syntax

Its syntax is as follows –

```
Date.setUTCMilliseconds(millisecondsValue)
```

Note – Parameters in the bracket are always optional.

Parameter Detail

millisecondsValue – A number between 0 and 999, representing the milliseconds

If a parameter you specify is outside the expected range, setUTCMilliseconds attempts to update the date information in the Date object accordingly. For example, if you use 1100 for millisecondsValue, the seconds stored in the Date object will be incremented by 1, and 100 will be used for milliseconds.

Example

Try the following example.

```
