Copyright © tutorialspoint.com

Description

JavaScript date **toLocaleDateString** method converts a date to a string, returning the "date" portion using the operating system's locale's conventions.

Syntax

Its syntax is as follows –

```
Date.toLocaleDateString()
```

Return Value

Returns the "date" portion using the operating system's locale's conventions.

Example

Try the following example.

```
<html>

  <head>
    <title>JavaScript toLocaleDateString Method</title>
  </head>

  <body>

    <script type="text/javascript">
      var dt = new Date(1993, 6, 28, 14, 39, 7);
      document.write( "Formatted Date : " + dt.toLocaleDateString() );
    </script>

  </body>
</html>
```

Output

```
Formatted Date : 7/28/1993
```
