Copyright © tutorialspoint.com

Description

JavaScript date **toLocaleFormat** method converts a date to a string using the specified formatting.

Note – This method may not be compatible with all the browsers.

Syntax

Its syntax is as follows –

```
Date.toLocaleFormat()
```

Parameter Details

formatString – A format string in the same format expected by the strftime function in C.

Return Value

Returns the formatted date.

Example

Try the following example.

```
<html>

  <head>
    <title>JavaScript toLocaleFormat Method</title>
  </head>

  <body>

    <script type="text/javascript">
      var dt = new Date(1993, 6, 28, 14, 39, 7);
      document.write( "Formatted Date : " + dt.toLocaleFormat( "%A, %B %e, %Y" ) );
    </script>

  </body>
</html>
```

Output

```
Formatted Date : Wed Jul 28 1993 14:39:07 GMT+0530 (India Standard Time)
Loading [MathJax]/jax/output/HTML-CSS/fonts/TeX/fontdata.js
```
