

JAVASCRIPT - REGEXP CONSTRUCTOR PROPERTY

http://www.tutorialspoint.com/javascript/regexp_constructor.htm

Copyright © tutorialspoint.com

Description

It returns a reference to the array function that created the instance's prototype.

Syntax

Its syntax is as follows –

```
RegExp.constructor
```

Return Value

Returns the function that created this object's instance.

Example

Try the following example program.

```
<html>

  <head>
    <title>JavaScript RegExp constructor Property</title>
  </head>

  <body>

    <script type="text/javascript">
      var re = new RegExp( "string" );
      document.write("re.constructor is:" + re.constructor);
    </script>

  </body>
</html>
```

Output

```
re.constructor is: function RegExp() { [native code] }
```
