

JSTL FN:ESCAPEXML FUNCTION

http://www.tutorialspoint.com/jsp/jstl_function_escapexml.htm

Copyright © tutorialspoint.com

The fn:escapeXml function escapes characters that can be interpreted as XML markup.

Syntax:

The fn:escapeXml function has following syntax:

```
java.lang.String escapeXml(java.lang.String)
```

Example:

Following is the example to explain the functionality of this function:

```
<%@ taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c" %>
<%@ taglib uri="http://java.sun.com/jsp/jstl/functions" prefix="fn" %>
<html>
<head>
<title>Using JSTL Functions</title>
</head>
<body>

<c:set var="string1" value="This is first String."/>
<c:set var="string2" value="This <abc>is second String.</abc>" />

<p>With escapeXml() Function:</p>
<p>string (1) : ${fn:escapeXml(string1)}</p>
<p>string (2) : ${fn:escapeXml(string2)}</p>

<p>Without escapeXml() Function:</p>
<p>string (1) : ${string1}</p>
<p>string (2) : ${string2}</p>

</body>
</html>
```

This would produce following result:

With escapeXml() Function:

string (1) : This is first String.

string (2) : This <abc>is second String.</abc>

Without escapeXml() Function:

string (1) : This is first String.

string (2) : This is second String.
