

PERL CLOSEDIR FUNCTION

http://www.tutorialspoint.com/perl/perl_closedir.htm

Copyright © tutorialspoint.com

Description

This function closes the directory handle DIRHANDLE.

Syntax

Following is the simple syntax for this function –

```
closedir DIRHANDLE
```

Return Value

This function returns 0 on failure and 1 on success.

Example

Following is the example code showing its basic usage –

```
#!/usr/bin/perl -w

$dirname = "/tmp";

opendir ( DIR, $dirname ) || die "Error in opening dir $dirname\n";
while( ($filename = readdir(DIR)){
    print("$filename\n");
}
closedir(DIR);
```

When above code is executed, it produces the following result –

```
.
..
testdir
```
