PERL EXIT FUNCTION

Description

This function evaluates EXPR, exits the Perl interpreter, and returns the value as the exit value. Always runs all END{} blocks defined in the script *andimportedpackages* before exiting. If EXPR is omitted, then the interpreter exits with a value of 0. Should not be used to exit from a subroutine; either use eval and die or use return.

Syntax

Following is the simple syntax for this function −

```
exit EXPR

exit
```

Return Value

This function does not return any value.

Example

Following is the example code showing its basic usage −

When above code is executed, it produces the following result −
