Copyright © tutorialspoint.com

Description

This function resets *clears* all package variables starting with the letter range specified by `EXPR`. Generally only used within a `continue` block or at the end of a loop. If omitted, resets `?PATTERN?` matches.

Variables that have been declared using the `my` function will not be reset.

Using `reset` can reset system variables you may not want to alter-like the `ARGV` and `ENV` variables.

Syntax

Following is the simple syntax for this function –

```
reset EXPR  
  
reset
```

Return Value

This function returns 1.

Example

Following is the example code showing its basic usage –

```
#!/usr/bin/perl -w  
  
my $var = 10;  
$van = 5;  
  
print "Var value =$var, Van value =$van\n";  
# Now reset all variables who name starts with 'v'  
reset('v');  
print "Var value =$var, Van value =$van\n";
```

When above code is executed, it produces the following result –

```
Var value =10, Van value =5  
Var value =10, Van value =
```
