## Description

This function sets the current process group for the process PID. You can use a value of 0 for PID to change the process group of the current process. If both arguments are omitted, defaults to values of 0. Causes a fatal error if the system does not support the function.

## Syntax

Following is the simple syntax for this function –

```
setpgrp PID, PGRP
```

## Return Value

This function returns undef on failure and new parent process ID.

## Example

Following is the example code showing its basic usage –

When above code is executed, it produces the following result –
