

PERL TIMES FUNCTION

http://www.tutorialspoint.com/perl/perl_times.htm

Copyright © tutorialspoint.com

Description

This function returns a four-element list giving the user, system, child, and child system times for the current process and its children.

Syntax

Following is the simple syntax for this function –

```
times
```

Return Value

This function returns ARRAY, *\$usertime*, *\$systemtime*, *\$childsystem*, *\$childuser*

Example

Following is the example code showing its basic usage –

```
#!/usr/bin/perl -w

($usertime, $systemtime, $childsystem, $childuser) = times();
print("times() $usertime $systemtime $childsystem $childuser\n");
```

When above code is executed, it produces the following result –

```
times() 0 0 0 0
```
