

Python List append() Method

Description

Python list method **append()** appends a passed obj into the existing list.

Syntax

Following is the syntax for **append()** method –

```
list.append(obj)
```

Parameters

- **obj** – This is the object to be appended in the list.

Return Value

This method does not return any value but updates existing list.

Example

The following example shows the usage of append() method.

```
#!/usr/bin/python
```

```
aList = [123, 'xyz', 'zara', 'abc'];  
aList.append( 2009 );  
print "Updated List : ", aList
```

[Live Demo](#)

When we run above program, it produces following result –

```
Updated List : [123, 'xyz', 'zara', 'abc', 2009]
```
