Standard Options:

NA

Widget-specific Options:

SN	Options with Description
1	icon => String Specify the icon of the messageBox. Valid values are error , info , question , or warning .
2	type => String Specify the type of the messageBox. Valid values are abortretryignore , ok , okcancel , retrycancel , yesno , or yesnocancel . The type determines the buttons to be shown.
3	default => String Specify the default button. This must be one of abort , retry , ignore , ok , cancel , yes , or no , depending on the type of the messageBox previously specified.
4	detail => String Specify text for the detail region of the messageBox.
5	message => String Specify the message text of the messageBox.
6	title => String Specify the title of the messageBox.

Event Bindings:

NA

Examples:

```
require 'tk'

root = TkRoot.new
root.title = "Window"

msgBox = Tk.messageBox(
  'type'    => "ok",
  'icon'    => "info",
  'title'   => "This is title",
  'message' => "This is message"
)
Tk.mainloop
```

This will produce the following result:
