Description

This callback function is called when a drag is in progress.

Syntax

```
new Draggable('element', {onDrag: 'effectFunction'});
```

Here effectFunction is the function, which defines the effect to be applied.

Example

```
<html>
  <head>
    <title>Draggables Elements</title>

    <script type="text/javascript" src="/javascript/prototype.js"></script>
    <script type="text/javascript" src="/javascript/scriptaculous.js"></script>

    <script type="text/javascript">

      window.onload = function(){
        new Draggable('myimage',
          {
            onDrag : function(){
              new Effect.Opacity('myimage', {from:0, to:1.0, duration:1});
            }
          }
        );
      }
    </script>

  </head>
  <body>

    <p>While you drag this image it become disappear.</p>
    <img />

  </body>
</html>
```

This will produce following result –
