

What is Domain Testing?

Domain testing is a software testing technique in which selecting a small number of test cases from a nearly infinite group of test cases. For testing few applications, Domain specific knowledge plays a very crucial role.

Domain testing is a type of functional testing and tests the application by feeding interesting inputs and evaluating its outputs.

Domain - Equivalence Class Testing

Equivalence class carries its own significance when performing domain testing. Different ways of equivalence class are:

- Intuitive equivalence
- Specified equivalence
- Subjective equivalence
- Risk-based equivalence:
