## What is Non-Functional Testing?

Non-Functional testing is a software testing technique that verifies the attributes of the system such as memory leaks, performance or robustness of the system. Non-Functional testing is performed at all test levels.

## Non-Functional Testing Techniques:

- Baseline testing
- Compatibility testing
- Compliance testing
- Endurance testing
- Load testing
- Localization testing
- Internationalization testing
- Performance testing
- Recovery testing
- Resilience testing
- Security testing
- Scalability testing
- Stress testing
- Usability testing
- Volume testing
