SCHEDULE

What is schedule?

The Software schedule is directly correlated to the size of the project, efforts and costs involved.

Scheduling is done for 3 primary reasons as listed below:

- To commit to the timeliness of the project.

- To estimate the resources required for the project execution.

- To Estimate the cost of the project in order to allocate funds and get approval.

Software Schedule - Features:

- Scheduling is based on the experience in similar projects.

- The Software scheduling is done to ensure that critical milestone dates, dependency dates are achieved.

- The assumptions made for scheduling is well documented.

- The Scheduling is usually shared to the stake holders, agreed and signed off before kickstarting the actual development process.
