

What is Technical review?

A Technical review is a static white-box testing technique which is conducted to spot the defects early in the life cycle that cannot be detected by black box testing techniques.

Technical Review - Static Testing:

Technical Review Characteristics:

- Technical Reviews are documented and uses a defect detection process that has peers and technical specialist as part of the review process.
- The Review process doesn't involve management participation.
- It is usually led by trained moderator who is NOT the author.
- The report is prepared with the list of issues that needs to be addressed.
