TEST EXECUTION

What is Test Execution?

Test execution is the process of executing the code and comparing the expected and actual results. Following factors are to be considered for a test execution process:

- Based on a risk, select a subset of test suite to be executed for this cycle.

- Assign the test cases in each test suite to testers for execution.

- Execute tests, report bugs, and capture test status continuously.

- Resolve blocking issues as they arise.

- Report status, adjust assignments, and reconsider plans and priorities daily.

- Report test cycle findings and status.
