UDDI API - GET_REGISTEREDINFO

Description : The get_registeredInfo API call is used to get an abbreviated list of all businessEntity and tModel data that are controlled by the individual associated with the credentials passed.

Upon successful completion, a registeredInfo message is returned, listing abbreviated business information in one or more businessInfo elements, and tModel information in one or more tModelInfo elements. This API is useful for determining the full extent of registered business and tModel information controlled by a single user in a single call. This message complements the get_publisherAssertions message, which returns information about assertions managed by an individual publisher account.

Version 2.0 Syntax

```
<get_registeredInfo generic="2.0" xmlns="urn:uddi-org:api_v2" >
    <authInfo/>
</get_registeredInfo>
```

Arguments

authInfo : This required argument is an element that contains an authentication token. Authentication tokens are obtained using the get_authToken API call.

Error Returned

If any error occurs in processing this API call, a dispositionReport element will be returned to the caller within a SOAP Fault. The following error number information will be relevant:

E_authTokenExpired : It signifies that the authentication token value passed in the authInfo argument is no longer valid because the token has expired.

E_authTokenRequired : It signifies that the authentication token value passed in the authInfo argument is either missing or is not valid.
