

UDDI API - GET_TMODELDETAIL

http://www.tutorialspoint.com/uddi/get_tModelDetail.htm

Copyright © tutorialspoint.com

Description : The get_tModelDetail function retrieves the tModel record for each specified tModelKey.

The response includes a root tModelDetail element, and one tModel element for each matching tModel. If the UDDI operator returns only a partial list of matching results, the tModelDetail element's truncated attribute will be set to true. If no matches are found, an E_invalidKeyPassed error is returned.

Version 2.0 Syntax

```
<get_tModelDetail generic="2.0" xmlns="urn:uddi-org:api_v2">
  <tModelKey/>
  [<tModelKey/> ...]
</get_tModelDetail>
```

Arguments

tModelKey : Required uuid_key specifying the tModel. You can specify multiple tModelKeys.

Error Returned

If any error occurs in processing this API call, a dispositionReport element will be returned to the caller within a SOAP Fault. The following error number information will be relevant:

E_invalidKeyPassed : An invalid tModelKey was specified.
