

VB.NET - WITH... END WITH STATEMENT

http://www.tutorialspoint.com/vb.net/vb.net_with_statement.htm

Copyright © tutorialspoint.com

It is not exactly a looping construct. It executes a series of statements that repeatedly refers to a single object or structure.

The syntax for this loop construct is:

```
With object
    [ statements ]
End With
```

Example

```
Module loops
    Public Class Book
        Public Property Name As String
        Public Property Author As String
        Public Property Subject As String
    End Class
    Sub Main()
        Dim aBook As New Book
        With aBook
            .Name = "VB.Net Programming"
            .Author = "Zara Ali"
            .Subject = "Information Technology"
        End With
        With aBook
            Console.WriteLine(.Name)
            Console.WriteLine(.Author)
            Console.WriteLine(.Subject)
        End With
        Console.ReadLine()
    End Sub
End Module
```

When the above code is compiled and executed, it produces the following result:

```
VB.Net Programming
Zara Ali
Information Technology
```
