Decision making allows programmers to control the execution flow of a script or one of its sections. The execution is governed by one or more conditional statements.

Following is the general form of a typical decision making structure found in most of the programming languages:

VBScript provides following types of decision making statements. Click the following links to check their details.

Statement	Description
<a href="#">if statement</a>	An <b>if</b> statement consists of a boolean expression followed by one or more statements.
<a href="#">if..else statement</a>	An <b>if else</b> statement consists of a boolean expression followed by one or more statements. If the condition is True, the statements under <b>If</b> statements are executed. If the condition is false, Else part of the script is Executed
<a href="#">if...elseif..else statement</a>	An <b>if</b> statement followed by one or more <b>Elseif</b> Statements, that consists of boolean expressions and then followed by an optional <b>else statement</b> , which executes when all the condition becomes false.
<a href="#">nested if statements</a>	An <b>if</b> or <b>elseif</b> statement inside another <b>if</b> or <b>elseif</b> statements.
<a href="#">switch statement</a>	A <b>switch</b> statement allows a variable to be tested for equality against a list of values.
