A **Exit For** Statement is used when we want to Exit the **For** Loop based on certain criteria. When **Exit For** is executed, the control jumps to next statement immediately after the **For** Loop.

## Syntax

The syntax for **Exit For** Statement in VBScript is:

```
Exit For
```

## Flow Diagram

## Example

The below example uses **Exit For**. If the value of the Counter reaches 4, the For Loop is Exited and control jumps to the next statement immediately after the For Loop.

```
<!DOCTYPE html>
<html>
<body>
<script language="vbscript" type="text/vbscript">

  Dim a : a=10
  For i=0 to a Step 2 'i is the counter variable and it is incremented by 2
    document.write("The value is i is : " & i)
    document.write("<br></br>")
  If i=4 Then
    i=i*10 'This is executed only if i=4
    document.write("The value is i is : " & i)
    Exit For 'Exited when i=4
  End If
  Next
```

```
</script>
</body>
</html>
```

When the above code is executed, it prints the following output in the console.

```
The value is i is : 0
The value is i is : 2
The value is i is : 4
The value is i is : 40
```
