IsArray

The IsArray Function returns a boolean value that indicates whether or NOT the specified input variable is an array variable.

Syntax

```
IsArray(variablename)
```

Example

```
<!DOCTYPE html>
<html>
<body>
<script language="vbscript" type="text/vbscript">

a = array("Red", "Blue", "Yellow")
b = "12345"

Document.write("The IsArray result 1 : " & IsArray(a) & "<br />")
Document.write("The IsArray result 2 : " & IsArray(b) & "<br />")

</script>
</body>
</html>
```

When the above code is saved as .HTML and executed in Internet Explorer, it produces the following result:

```
The IsArray result 1 : True
The IsArray result 2 : False
```
