TimeValue

The TimeValue Function converts the given input string to a valid time.

Syntax

```
TimeValue(StringTime)
```

Example

```
<!DOCTYPE html>
<html>
<body>
<script language="vbscript" type="text/vbscript">

document.write(TimeValue("20:30") & "<br />")
document.write(TimeValue("5:15") & "<br />")
document.write(TimeValue("2:30:58") & "<br />")

</script>
</body>
</html>
```

When you save it as .html and execute it in Internet Explorer, then the above script will produce the following result:

```
8:30:00 PM
5:15:00 AM
2:30:58 AM
```
