

MATERIAL - EDITOR ICONS

This chapter explains the usage of Google's *Material* Editor icons. Assume that **custom** is the CSS class name where we defined the size and color, as shown in the example given below.

```
<!DOCTYPE html>
<html>
  <head>
    <link href = "https://fonts.googleapis.com/icon?family=Material+Icons" rel =
"stylesheet">

    <style>
      i.custom {font-size: 2em; color: green;}
    </style>

  </head>

  <body>
    <i class = "material-icons custom">accessibility</i>
  </body>

</html>
```

The following table contains the usage and results of Google's *Material* Editor icons. Replace the <body > tag of the above program with the code given in the table to get the respective outputs –
